

Black letters are mainly descriptions of patterns.

Blue letters are descriptions of polar caps and clouds.

Brown letters are the description about dust.

Red is a special note.

2021 年 4 月 7 日

今日も日本の観測条件は悪い。その中でも、石橋の画像は表面の様子をよく記録している。目立つのは Xanthe (W53,+15)付近が非常に明るい様子だ。4月6日にも見られている。また NPC 付近も同じ色で明るくなっている。かなりダスティーな状態になっているようだ。南極地方は白雲が広がっているが、Solis Lacus (W90;-28)付近は取り残されたように暗くなっている。近内の画像は、色が非常にわかりやすく、NPC 付近は Xanthe 付近の明るさよりもかなり淡い様子が分かる。

2021, Apr. 7

Observation conditions in Japan are still bad today. Among them, the image of Ishibashi is a good record of the surface condition. What stands out is that the area around Xanthe (W53, +15) is very bright. It is also seen on April 6th. The area around the NPC is also bright with the same color. It seems to be in a pretty dusty state. White clouds are widespread in Antarctica, but the area around Solis Lacus (W90; -28) is dark as if left behind. Konnai's image is very easy to see in color, and you can see that the area around the NPC is much lighter than the brightness near Xanthe.
