

Black letters are mainly descriptions of patterns.

Blue letters are descriptions of polar caps and clouds.

Brown letters are the description about dust.

Red is a special note.

2021 年 5 月 14 日

伊藤は、2 夜連続で同じ地域の観測を行った。前日とは、経度で 4° の違いがある。今日は二重 limb の影響は少なく、stack only の画像も、処理画像も、通常の写り方を示している。左上に Solis Lacus (W90;-28)や Tithnius Lacus (80W~90W,-0)が写っている。肉眼でシーイングがよいと、処理画像のような姿が見える。シーイング 6 程度で、倍率を 600 倍くらいにして見える姿である。

2021, May, 14

Ito made observations in the same area for two consecutive nights. This image has a difference of 4° in longitude from the previous day. Today, the effect of double limbs is small, and both stack only images and processed images show normal appearance. Solis Lacus (W90; -28) and Tithnius Lacus (80W ~ 90W, -0) are shown in the upper left. If seeing is good with the naked eye, it looks like a processed image. This is a seeing of about 6, and the magnification is about 600 times.
