

Black letters are mainly descriptions of patterns.

Blue letters are descriptions of polar caps and clouds.

Brown letters are the description about dust.

Red is a special note.

2022 年 3 月 18 日 (2022, Mar. 18)

Guan.Zhong Wang は、前日の Mare Sirenum 付近を観測した。残念だが、報告された画像には、雲のようなものは見当たらなかった。

Michael Rosolia はスケッチを送ってきた。Meridiani (0W,-5)と Sinus Sabaeus (320W~350W,-10)付近は濃く見えているようだ。スケッチではあるが、Web カメラの像を見ながらの観測のようだ。モニターに写る像のコントラストを少し上げれば、肉眼よりも分かりやすくなると思われる。

Guan.Zhong Wang observed near Mare Sirenum the day before. Unfortunately, I couldn't find anything like clouds in the reported images.

Michael Rosolia sent me a sketch. The area around Meridiani (0W, -5) and Sinus Sabaeus (320W ~ 350W, -10) seems to look dark.

Although it is a sketch, it seems to be an observation while looking at the image of the Web camera. The image will be easier to understand than the naked eye if the contrast of the image on the monitor is increased a little.

(by 2 observations; reported by Makoto Adachi)
