

Black letters are mainly descriptions of patterns.

Blue letters are descriptions of polar caps and clouds.

Brown letters are the description about dust.

Red is a special note.

2023 年 2 月 3 日 (2023, Feb. 03)

Electris (165W~190,-40~-53)南方の SPH の晴れ間は健在であるが、若干雲が広がってきて、不鮮明になりつつある。Mare Sirenum (140W~170W,-30)と Mare Cimmerium (W180~W250,-40~0)との中間部はかなりダスティーで、荒川や伊藤の画像がその様子を記録している。ダストベールなので、輪郭はない。

Javier beltran Jovani と Christofer Mauricio Baez Jimenez の二人の画像を比べると、Hellas (275~315W,-30~60)の雲は日没時に明るくなる様子が分かる。

Electris (165W~190,-40~-53) SPH in the south is still sunny, but the clouds are spreading a little and it's getting blurry. The middle part between Mare Sirenum (140W~170W, -30) and Mare Cimmerium (W180~W250, -40~0) is quite dusty, as recorded by Arakawa and Ito's images. Since it is a dust veil, there is no outline.

Comparing the images of Javier beltran Jovani and Christofer Mauricio Baez Jimenez, we can see that the clouds of Hellas (275~315W, -30~60) brighten at sunset.

(by 8 observations; reported by Makoto Adachi)
