

Black letters are mainly descriptions of patterns.

Blue letters are descriptions of polar caps and clouds.

Brown letters are the description about dust.

Red is a special note.

2023 年 5 月 3 日 (2023, May, 03)

5 月 2 日に発生した Mare Acidarium (20~45W,+40~55)北東のダストは、今日は少し淡くなってきたようで、NPC 周囲のバンドが透けて見えていた。Mare Acidarium (20~45W,+40~55)付近はかなりダスティーで、模様の濃さが淡くなっている。Raimondo Sedrani の画像の中央付近の明部は地表の模様で、ダストではない。Rudolf A. Hillebrecht の画像は Tharsis (80W~120W,+10)付近の白雲をリム近くで白く記録している。これは、この時期の通常の様子である。

The dust northeast of Mare Acidarium (20~45W, +40~55), which occurred on May 2, seems to have faded a little today, and the band around the NPC was visible through it. The area around Mare Acidarium (20~45W, +40~55) is quite dusty and the density of the pattern is light. The bright part near the center of Raimondo Sedrani's image is a surface pattern, not dust. Rudolf A. Hillebrecht's image records white clouds near Tharsis (80W~120W, +10) as white near limb. This is normal at this time of year.
