

Black letters are mainly descriptions of patterns.

Blue letters are descriptions of polar caps and clouds.

Brown letters are the description about dust.

Red is a special note.

2025 年 3 月 10 日 (2025, Mar. 10)

今日も SPH は目立たない。一方赤道帯霧は Chryse (35W,+10)から Tharsis (80W~120W,+10)方面で明るくよく見えている。Meridian (0W,-5)の西側に明るい部分が見える。Raimondo Sedrani の画像は、地表の淡い模様がよくわかる。コントラストを上げているのではっきりしたのだが、この画像からはダスティーなところは黄色っぽく、ダストの少ないところは赤っぽく記録された。

SPH is not very prominent today. On the other hand, the equatorial fog is bright and clearly visible from Chryse (35W, +10) to Tharsis (80W~120W, +10). A bright area is visible to the west of Meridian (0W, -5). Raimondo Sedrani's image clearly shows the faint patterns on the surface of the Earth. Although it is clear because the contrast is increased, the dusty areas are recorded as yellowish and the areas with less dust are recorded as reddish in this image.

(by 9 observations; reported by Makoto Adachi)
