日本は、晴れた地域ができて、観測が集まった。NPC 周囲には雲がかかり、極冠の輪郭は不鮮明になった。低緯度帯の夕刻は、雲が発生しやすく、どの観測者も明るく記録している。栗栖の画像には、リムに Olympus Mons (135W,+25)が白く記録されている。Chris Nuttall は Meridian (0W,-5)の南側を暗く観測している。

In Japan, a clear area was formed and observations were concentrated. Clouds were formed around the NPC, making the outline of the polar cap unclear. Clouds are likely to form in the evening at low latitudes, and all observers recorded bright images. Olympus Mons (135W, +25) is recorded as white on the limb in Kurisu's image. Chris Nuttall observed the south side of Meridian (0W, -5) as dark.

(by 6 observations; reported by Makoto Adachi)
